TRAINING TIPS:

- Make sure to check in with your doctor with regard to your physical fitness prior to starting any training program.
- Get your bike tuned up at your local bike shop and make sure your bike is set up properly to assure the most comfortable ride.
- Invest in some padded riding shorts/pants and use Ruby's Lube or other chamois cream liberally to reduce saddle sores.
- Learn how to confidently change a tire and keep a spare tube, hand pump, tire levers and a CO2 tire inflator with you on every ride.
- The goal while training is to feel good every day, starting from day one of training all the way through the finish line. At the beginning of the training keep most of your rides at an easy pace. As training progresses start working toward your goal pace on some of your rides, and add some variety in terrain (hilly routes vs. flat), and effort (e.g. spin classes are great interval workouts that can help increase your overall speed).
- Learn to use your gears appropriately according to the terrain. Grinding up a hill in a big gear will most likely slow you down, aggravate your knees and trash your quads. Ride in an easier gear and increase your cadence.
- Join your local cycling club for group rides or find some buddies to ride with at least once a week.
- Pick one or two organized rides to mix into your training. This will give you experience riding in a group, plus offer companionship and support along the route.
- Seek out new ride routes to keep things interesting.
- Lastly, have fun! Don't forget to stop and smell the roses, admire the view, or enjoy a latte and scone along the way.
